Oberon System 3 is an extension of the Oberon system and is provided as an alternative to the basic system. It is not intended as a replacement of the original version as described in the Oberon books. Oberon System 3 differs from Oberon in the following ways:
– Support for persistent objects in the system core.
– Higher level of integration between all types of objects.
Gadgets is a graphical user interface management system for Oberon System 3. It consists of a set of end-user objects for building graphical user interfaces. This construction process is done at run-time, hence end-user objects. These end-user objects are called gadgets. Gadgets may range from buttons and
