Dear Reader,

When I was compiling a list of subjects treated in COMP.TEXT.SGML from 09-1990 to 07-1994 I thought, well, I may use the program to compile some statistics on the fly. You never know what you learn. This is the result of this strange idea, and I personally like it a lot. There are four outcomes I'd like to share with you. Remember that I worked with the header lines *only*, so anything stated about what has been treated on the list at that period in time applies to the information found there. *(Tip: just for fun, try to find the answer to the question before you look at the list...)*

- **What words describe the list best?** (frequency list of 'terms' used in the subject lines)
- **Who are the pillars of the COMP.TEXT.SGML society?** This is the mega-top-75 of contributors.
- **Is the list dying?** A graph showing number of entries to the list, per month.
- **What are the subjects?** Complete list of subjects with date and sender.

If you are interested in the TEI (Text Encoding Initiative) list server contributions, look under:

```
ftp.let.ruu.nl/pub/users/loeffen/tei
```

for similar information.

What words describe the list best? These are the (in my opinion) most significant words used, with their frequency (in subject lines). I don't have to tell you the relative use of such lists, but it may give you a nice impression. The strangest word to appear in the subject line is the most frequent one: 'SGML'. I removed words that do not have much relevance in this framework, and those that occurred less than 25 times.

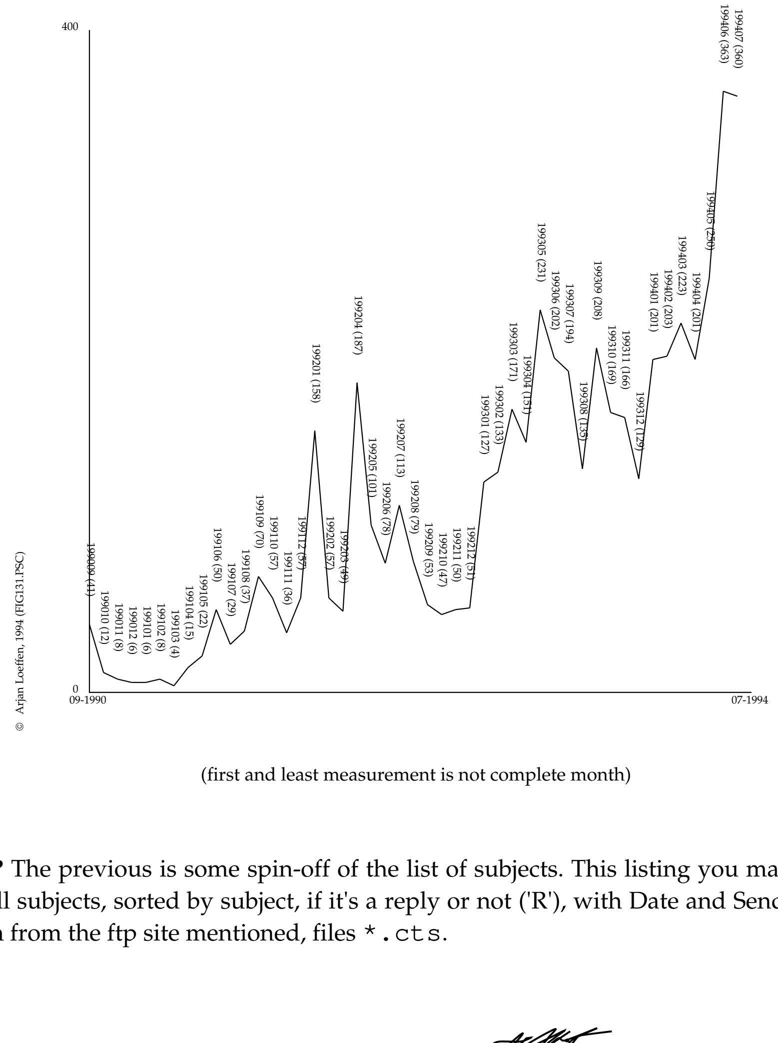
Is the list dying? Someone told me recently that the COMP.TEXT.SGML was fading away: all topics have been discussed. Well, this may be so, but it certainly does not show from statistics. Maybe there's a shift toward more practical themes? Have other people found the list to send their questions to? The number of entries to the list, irrespective to their size, impact or origin, is growing. This has been depicted in the figure below. Vertically the number of submissions per month. Horizontally the period 07-1990 -- 09-1994:



(first and least measurement is not complete month)

What are the subjects? The previous is some spin-off of the list of subjects. This listing you may find most interesting, and it's bulky. It contains all subjects, sorted by subject, if it's a reply or not ('R'), with Date and Sender. Hope you find it useful. Get your ASCII version from the ftp site mentioned, files `*.cts`.
