Dear Reader,

When I was compiling a list of subjects treated in some discussion groups, and was working on TEI-L from 01-1990 to 06-1994 I thought, well, I may use the program to compile some statistics on the fly. You never know what you learn. This is the result of this strange idea. There are four outcomes I'd like to share with you. Remember that I worked with the header lines *only*, so anything stated about what has been treated on the list at that period in time applies to the information found there. *(Tip: just for fun, try to find the answer to the question before you look at the list...)*

- **What words describe the list best?** (frequency list of 'terms' used in the subject lines)
- **Who are the protagonists of the TEI List?** This is the mega-top-20 of contributors.
- **Any progress in the TEI discussions?** A graph showing number of entries to the list, per month.
- **What are the subjects?** Complete list of subjects with date and sender.

You can find the ascii versions of all lists (rough material, use it any way you like it) in the files on

`ftp.let.ruu.nl/pub/users/loeffen/tei`

If you are interested in the COMP.TEXT.SGML variant of these lists, look under `/cts`.

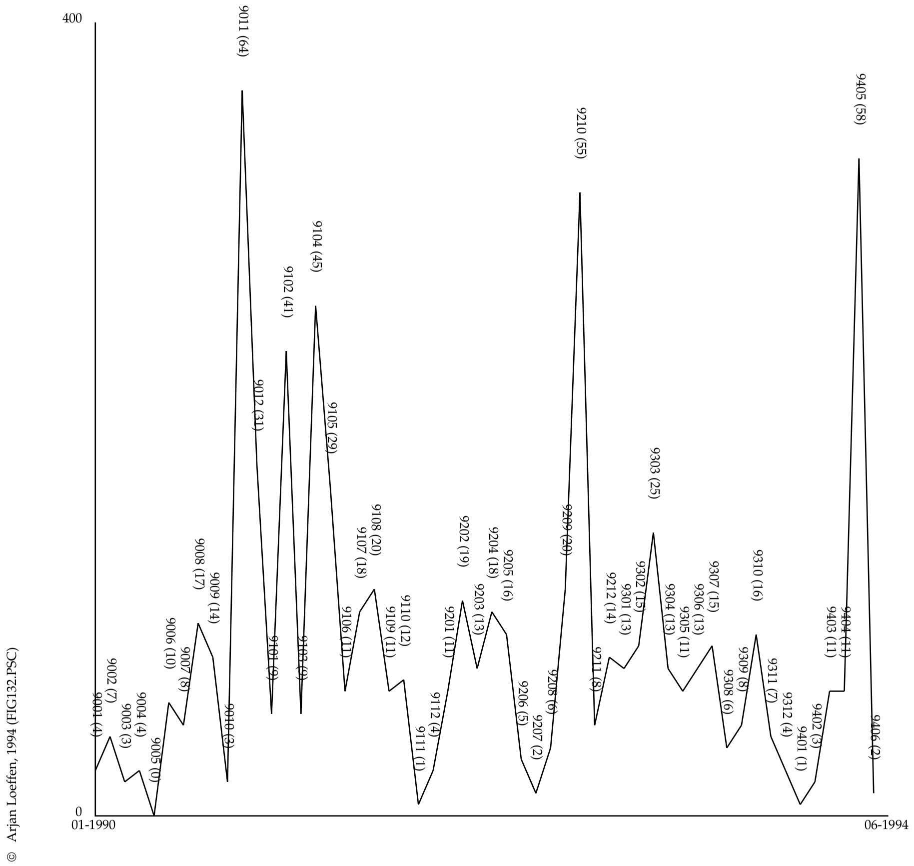
What words describe the list best? These are the (in my opinion) most significant words used, with their frequency (in subject lines). I don't have to tell you the relative use of such lists, but it may give you a nice impression. As holds for the COMP.TEXT.SGML, the strangest word to appear in the subject line is the most frequent one: 'TEI'. I removed words that do not have much relevance in this framework, and those that occurred less than 8 times.

tei 122	conference 22	p2 13	papers 9
sgml 119	away 20	parser 13	q (for question) 9
mail 47	guidelines 18	tag 13	set 9
new 40	information 18	workshop(s) 25	announcement 8
character 39	list 18	note 12	below 8
encoding 38	unicode 18	call 11	chapter 8
ipa 38	available 17	getting 11	copies 8
textual 36	fascicle 16	comments 10	document 8
names 35	software 16	data 10	header 8
variants 31	iso 15	electronic 10	public 8
coding/presenting 28	project 15	meeting 10	
dtd(s) 28	entities 13	re 10	
text 27	markup 13	forwarded 9	
report 26	office 13	lexical 9	

Who are the protagonists of TEI List? This this the top-20 of contributors:

c. m. sperberg-mcqueen 99	david megginson 14	sgml project 7
lou burnard 51	harry gaylord 14	john price-wilkin 6
don walker 21	robert a amsler 13	rwonnebe@cmsa.gmr.com 6
erik naggum 21	keld j|rn simonsen 9	michel eytan lilol 5
peter flynn 20	d.a. schmidt 9	liam r. e. quin 5
glenn adams 17	michael s. hart 9	kraft@penndrls.bitnet 5
robin c. cover 16	willard mccarty 7	

Any progress in the discussions? The number of entries to the list, irrespective to their size, impact or origin, bounces up and down through time, largely due to the work and results of the TEI comittee (release of P drafts & final version). This is clearly visible in the figure below. Vertically the number of submissions per month. Horizontally the period 01-1990 -- 06-1994:



(First and last measurement is not complete month)

What are the subjects? The previous is some spin-off of the list of subjects. This listing contains all subjects, sorted by subject, if it's a reply or not ('R'), with Date and Sender. Hope you find it usefull. Note that I have removed mailings that do not have a subject (there are about 20 of those).

Arjan
